

Project Report

1. Project Title

Social Media Analytics for Strategic Branding

2. Objective

The objective of this project was to analyze social media engagement data and generate meaningful insights to improve brand performance and marketing strategies. The project focused on understanding customer engagement, campaign effectiveness, hashtag trends, and follower growth using Microsoft Excel.

3. Problem Statement

Brands generate large amounts of social media data, but raw data alone does not help businesses make decisions. This project aimed to clean, organize, and analyze social media metrics to identify performance trends and support data-driven marketing decisions.

4. Tools & Technologies Used

- Microsoft Excel
- Pivot Tables
- VLOOKUP / XLOOKUP
- Charts & Visualizations
- Dashboard Creation
- Data Cleaning Techniques

5. Dataset Description

The dataset contained social media engagement metrics such as:

- Likes
- Comments
- Shares
- Follower Growth
- Hashtags
- Campaign Performance Data

6. Project Workflow

Step 1: Data Collection

The dataset was provided for analysis and contained social media engagement information.

Step 2: Data Cleaning

Performed:

- Duplicate removal
- Missing value handling
- Data formatting
- Data organization for analysis

Step 3: Data Analysis

Analyzed:

- Top-performing content
- Hashtag performance
- Engagement trends
- Campaign effectiveness
- Follower growth

Step 4: Dashboard Creation

Created an interactive dashboard using:

- Pivot Tables
- Charts
- KPIs
- Excel Functions

7. Key Insights

- Identified top hashtags generating higher engagement
- Found campaigns that increased followers the most
- Measured engagement and campaign performance trends
- Identified top-performing content types

8. Recommendations

- Focus more on high-performing hashtags
- Improve content strategy based on engagement trends
- Increase investment in successful campaigns
- Use dashboards for continuous performance monitoring

9. Challenges Faced

- Handling unstructured and inconsistent raw data
- Cleaning and organizing data for analysis
- Identifying useful patterns from large datasets

10. Future Improvements

- Add Power BI dashboards for advanced visualization
- Implement real-time data tracking
- Perform deeper trend prediction and segmentation analysis

11. Conclusion

This project helped analyze social media performance and provided useful insights for improving marketing strategies. It enhanced skills in data cleaning, analysis, dashboard creation, and business insight generation using Excel.
